## Introduction

This document will present the results of my testing project on the Superpharm app. The purpose of this report is to showcase my findings on a real application, and to demonstrate my abilities in the QA field.

It should be stated that this is a QA course project, meaning I am not employed by Superpharm to do this, and did not have access to any SRS documents or other benefits of testing within the company.

The testing process included writing a detailed STD and following it, with some experimental testing to complement. When executing tests, bugs were reported using Jira. The test process included functional and non-functional tests and the results reflect that.

## For Employers

The underlying goal of this report is to showcase potential employers that I can contribute to any QA team. In this report you will see my ability to detect bugs in an actual website and my ability to report my findings in an intelligent and useful manner.

---

## App Overview

The Superpharm App is rich with features and capabilities, all oriented towards a shared goal of driving customers to shop at any of the companies' many branches and easing this process. In this project any feature will be measured first and foremost by how well it facilitates that goal.

To simplify, I compiled a list of what I deemed to be the most crucial features of the app:

1. To showcase Superpharm's sales and entice customers
2. To Allow customers easy access to the product lists and inventories of each store
3. To facilitate a dynamic shopping list feature for customers
4. To showcase all relevant information on each store easily, and by location
5. To function as a hub for all other events/features/resources of Superpharm

It should be stated that this is a QA course project, meaning I am not employed by Superpharm to do this, and did not have access to any SRS documents or other benefits of testing within the company.

The testing process included writing a detailed STD and following it, with some experimental testing to complement. When executing tests, bugs were reported using Jira. The test process included functional and non-functional tests and the results reflect that.

---

## Metrics

With 8.5% failed tests out of test run, these results indicate the Superpharm app still includes bugs and further testing will be helpful, however the relative condition of the app is good.

### Test Results

### Test Results

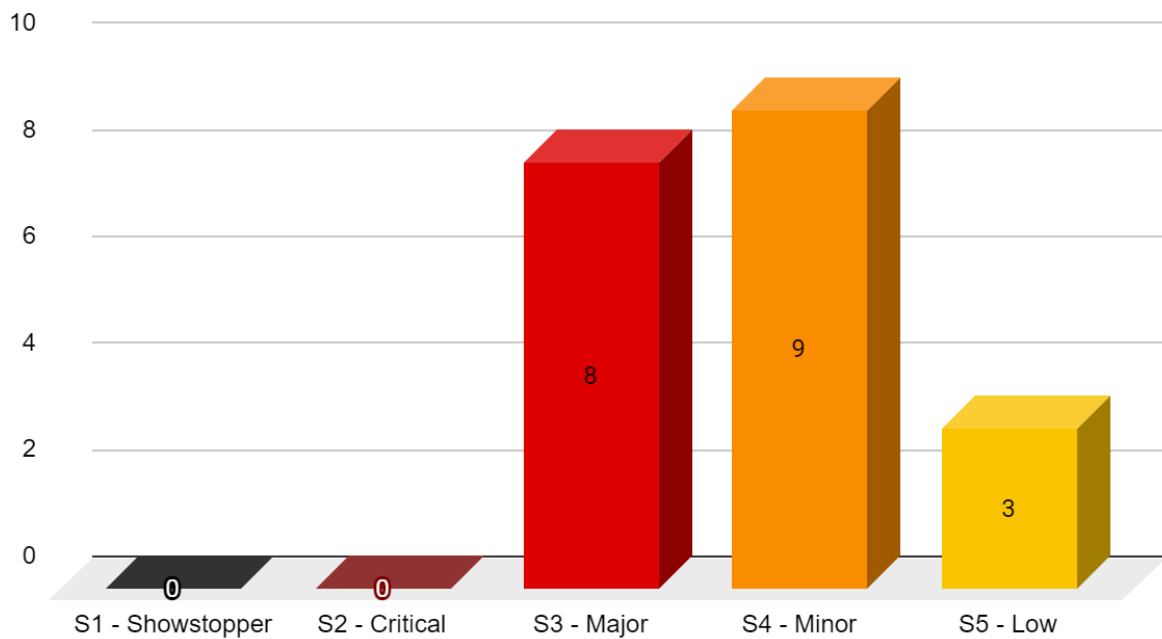

Passed	Failed	Not Run	Total
214	20	43	277

Tests not run include mostly tests that require purchasing items/connecting to a cashier with the app. Since I'm not working for Superpharm, I can't test certain features without actually purchasing items.

---

The following graph shows the found bugs distribution by severity level. No bugs above S3 severity level is a good sign that the app is customer ready, however most of the bugs found were minor & major.

### Bugs By Severity Level

Bugs' severity level by type of bug

	Functionality	UI/UX	GUI	Performance
Major	4	3	0	1
Minor	1	8	0	0
Low	0	0	3	0

---

This chart shows the distribution of bug types found within the testing process.

## Bug Types

---

## Recommendations

Following my findings in this report, it is my recommendation that the Superpharm app stay active for users with all of its features intact, but further testing can still uncover more issues.

As always bugs should be fixed whenever possible and especially those with higher severity, though I'd like to highlight specifically [PHARM-5](#). An especially long load time for an app can be off putting to users and may cause many potential users to diminish or cease entirely their use of the app. Therefore it is my recommendation that this issue will be given a high priority.

---

## Conclusion

While testing discovered many bugs, none are critical or worse which gives confidence in the app. With only 8.5% fail rate for tests, it seems that the most common problems have already been fixed, or have been found in this report.

It should be noted also that the overwhelming majority of the bugs found by this report are S3-4, meaning mostly issues with actual features and not just small graphical bugs.

The testing process was as extensive as I could manage for a project, however the Superpharm app is large and ripe with features and content, so without a doubt I've missed many potential test cases and bugs.

Additionally, I would like to highlight two systemic issues with my testing process. First, since I am not working with Superpharm I refrained from any testing that required purchases. Second, all tests were conducted on the same phone - my Xiaomi Redmi 9 using an android operating system.

It is my conclusion for this testing cycle that the app is ready for further use by customers, but that bug fixing should be applied with priority on the points mentioned in the recommendations section.

---

## Bug List

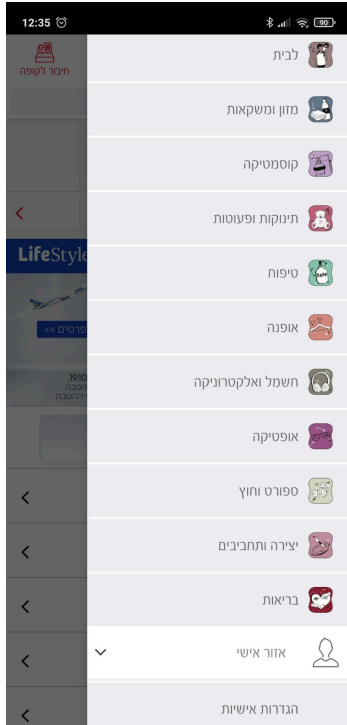

Issue key	Summary
<a href="#">PHARM-1</a>	Menu tab is difficult to scroll
<a href="#">PHARM-2</a>	Sales disclaimer appears in sections that aren't sales
<a href="#">PHARM-3</a>	'רשיונות קוד פתוח' section lacks a return button
<a href="#">PHARM-4</a>	'חזרה למעלה' button collapses expanded sections
<a href="#">PHARM-5</a>	Opening the app takes 7-10 seconds
<a href="#">PHARM-6</a>	Wrong spelling in SMS when trying to confirm phone number
<a href="#">PHARM-7</a>	Email address filtering is insufficient
<a href="#">PHARM-8</a>	Layout spasms when expanding a section and then expanding the section directly above it
<a href="#">PHARM-9</a>	Clicking on the search bar and then clicking elsewhere doesn't unselect the search bar
<a href="#">PHARM-10</a>	Some products lack an image
<a href="#">PHARM-11</a>	Header stays when clicking on a new section
<a href="#">PHARM-12</a>	When going to the Marketplace section through another section, the contact form is difficult to scroll on
<a href="#">PHARM-13</a>	When several sections are expanded, trying to un-expand a section doesn't work
<a href="#">PHARM-14</a>	No easy way to favorite Item from shopping list if it is in a sale
<a href="#">PHARM-15</a>	For a product that is on sale, in shopping list, and is favorited, pressing 'לתנאי המבצע' will show the option to remove from favorites as add to favorites
<a href="#">PHARM-16</a>	When using 'הוספת מוצר לרשימת קניות' from the search bar, items aren't actually added to the shopping list
<a href="#">PHARM-17</a>	Some products fail to show further information
<a href="#">PHARM-18</a>	When selecting filters for branches map, the chosen filters will not appear as selected after switching to the map and back
<a href="#">PHARM-19</a>	Some services are either available in no branch or just appear as if they aren't available in any branch
<a href="#">PHARM-20</a>	In the branches section, the 'פתוח בשבת' filter doesn't include the 'שעות ביממה 24' filter

## Bug Reports

[PHARM-1] [Menu tab is difficult to scroll](#) Created: 03/Oct/24 Updated: 03/Oct/24

Status:	To Do
Project:	<a href="#">Superpharm App</a>

Type:	Bug	Priority:	Medium
Reporter:	<a href="#">Omer Lev</a>	Assignee:	Unassigned
Environment:	Xiami Rednote S9 Android		

Severity:	S4 - Minor
Bug Type:	UI/UX
Attachments	

### Description

### Steps to Reproduce:

1. Open the app
2. Press 'תפריט'
3. Attempt to scroll on the left side of the screen or:
4. Attempt to scroll in a slightly angled manner

**Expected Result:**

You are able to scroll the menu up and down easily everywhere on the screen

**Actual Result:**

The menu won't scroll on the left side of the screen, and if the scrolling motion begins slightly angled the menu won't scroll unless a new motion is made (meaning the finger leaves the screen)

**[PHARM-2] [Sales disclaimer appears in sections that aren't sales](#)**

## Attachments

---

## Description

### Steps to Reproduce:

1. Open the app
2. Scroll down to 'אלימות במשפחה - זה לא נורמלי'
3. Click it to expand
4. Observe the disclaimer in the top part of the expanded area

### Expected Result:

Sections that aren't sales/products shouldn't have a sales disclaimer

### Actual Result:

The following sections contain this disclaimer even though it is irrelevant to their content

1. 'אלימות במשפחה - זה לא נורמלי'
2. 'עד שנרגיש יותר טוב'
3. 'הלוואות'

Severity:	S4 - Minor
Bug Type:	UI/UX

## Attachments

## Description

### Steps to Reproduce:

1. Open the app
2. Go to the 'סניפים' section
3. Click on the magnifying glass
4. Choose the 'Boxit' filter
5. Go back to the map

### Expected Result:

Either the branches with 'Boxit' should appear, or if no branch has that service the filter shouldn't exist

### Actual Result:

The filter exists and yields 0 branches.

This is true for Boxit, Fitskin, 'איסוף חבילות מחוץ לסניף',

---

**[PHARM-20] In the branches section, the 'פתוח בשבת' filter doesn't include the 'שעות ביממה 24' filter** Created: 12/Oct/24 Updated: 12/Oct/24

Status:	To Do
Project:	<a href="#">Superpharm App</a>

Type:	Bug	Priority:	Medium
Reporter:	<a href="#">Omer Lev</a>	Assignee:	Unassigned
Environment:	Android		

Severity:	S3 - Major
Bug Type:	Functionality

#### Description

##### Steps to Reproduce:

1. Open the app
2. Go to סניפים section
3. Click on the magnifying glass
4. Click on 'שעות ביממה 24'
5. Go back to the map and see that 'לונדון מיניסטור' is included
6. Go back to the filter section
7. Un-select 'שעות ביממה 24'
8. Select 'פתוח בשבת'
9. Go back to the map and see the 'לונדון מיניסטור' isn't included

##### Expected Result:

A branch that is open 24/7 should be marked as open on Saturdays

##### Actual Result:

Branches are treated as if they are either open on Saturdays **or** open 24/7
